HiggsML Uncertainty Challenge

Codabench Tutorial

1. Login or Create Account on Codabench <https://www.codabench.org/>

The screenshot shows the Codabench website interface for the "FAIR UNIVERSE - HIGGSML UNCERTAINTY CHALLENGE". The top navigation bar includes a search bar, "Benchmarks", "Resources", "Queue Management", "Login", and "Sign-up" links. The "Login" and "Sign-up" links are highlighted with a red box, and a large red arrow points upwards towards them. The main content area features a circular logo on the left, the challenge title in large bold letters, and statistics: 8 PARTICIPANTS and 39 SUBMISSIONS. Below this, it states the challenge is organized by FAIR Universe, with the current phase ending on 31 March 2024 at 05:00 GMT+5 and the current server time being 5 March 2024 at 15:05 GMT+5. A timeline shows the challenge duration from March to April 2024. The bottom navigation bar includes "Get Started", "Phases", "My Submissions", "Results", and "Forum". The left sidebar contains a menu with "Overview", "Evaluation", "Data", "Starting Kit", "Example Estimators", "Terms", and "Files". The main content area displays the "Overview" section, which includes an "Introduction" paragraph about the Higgs Boson discovery and the challenge's purpose.

Overview

Introduction

In 2012, the Nobel-prize-winning discovery of the Higgs Boson by the ATLAS and CMS experiments at the Large Hadron Collider (LHC) at CERN in Geneva, Switzerland was a major milestone in the history of physics. However, despite the validation it provided of the Standard Model of particle physics (SM), there are still numerous questions in physics that the SM does not answer. One promising approach to uncover some of these mysteries is to study the Higgs Boson in great detail, as the rate of Higgs Boson production and its decay properties may hold the secrets to the nature of dark matter and other phenomena not explained by the SM.

The LHC collides protons together at high energy and at a high rate. Each proton collision produces many outgoing particles.

Starting Kit

We are providing a starting kit as a Google Colab notebook to demonstrate the problem and a solution for it which can be submitted as a submission the competition. You can copy the Colab notebook and make changes as you want.

 [Open In Colab](#)

Dummy Sample Submission

Dummy sample submission is provided to make you understand what is expected as a submission. You can modify the sample submission the way you want but make sure the format is the same as instructed in the sample submission

5. Check results in the leaderboard

The interface shows a navigation bar with tabs: Get Started, Phases, My Submissions, **Results**, and Forum. The 'Results' tab is highlighted with a red box. Below the navigation bar, there are buttons for 'Phase 1' and 'Phase 2', and a search bar labeled 'Filter Leaderboard by Columns'. The main content area displays a table titled 'Results' with a download icon. The table has columns for Task, Participant, Entries, Date, Method Name, Quantile Score, Interval, Coverage, and Detailed Results. The first row is highlighted with a red box and a large red arrow pointing to it from the left. This row shows a gold medal icon, 'FAIR Universe' as the participant, 10 entries, a date of 2024-03-04 17:09, 'test' as the method name, a quantile score of 0.509, an interval of 0.06, coverage of 0.56, and a detailed results icon.

Results								
Task:				Fact Sheet Answers	ACAT TASK V0.2.2			
#	Participant	Entries	Date	Method Name	Quantile Score	Interval	Coverage	Detailed Results
	FAIR Universe	10	2024-03-04 17:09	test	0.509	0.06	0.56	
	FAIR Universe	10	2024-03-01 18:26	test	0.381	0.068	0.56

7. Starting kit as a Google Colab Notebook

The screenshot shows a Google Colab notebook interface. At the top, the title bar reads 'StartingKit_HiggsML_Uncertainty_Challenge.ipynb'. Below it is a menu bar with 'File', 'Edit', 'View', 'Insert', 'Runtime', 'Tools', and 'Help'. On the right side of the title bar are 'Share', a settings gear, and a user profile icon. Below the menu bar is a toolbar with '+ Code', '+ Text', and 'Copy to Drive'. On the far right of the toolbar are 'Connect', 'Colab AI', and an upward arrow. The main content area has a dark background. It starts with a large heading 'Starting Kit - FAIR UNIVERSE: HIGGSML UNCERTAINTY CHALLENGE'. Below this is a paragraph: 'For Overview and Decsptions of the competition, please visit the competition page'. This is followed by a section header 'Setup'. Below 'Setup' is a paragraph: 'COLAB determines whether this notebook is running on Google Colab.' Then there are two code blocks. The first code block contains:

```
[ ] COLAB = 'google.colab' in str(get_ipython())
```

 The second code block contains:

```
[ ] if COLAB:
    # clone github repo
    !git clone https://github.com/FAIR-Universe/HEP-Challenge.git
    !pip install iminuit

    # move to the HEP starting kit folder
    %cd HEP-Challenge/
```

 At the bottom of the notebook is a final paragraph: 'USE_PUBLIC_DATA determines whether to use a public dataset provided for the participants or use a small subset of the data for quick execution of this notebook'.

Setup

COLAB determines whether this notebook is running on Google Colab.

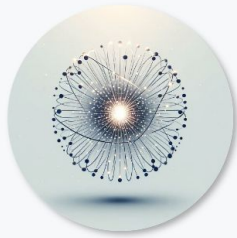

```
[ ] COLAB = 'google.colab' in str(get_ipython())
```

```
[ ] if COLAB:
    # clone github repo
    !git clone https://github.com/FAIR-Universe/HEP-Challenge.git
    !pip install iminuit

    # move to the HEP starting kit folder
    %cd HEP-Challenge/
```

USE_PUBLIC_DATA determines whether to use a public dataset provided for the participants or use a small subset of the data for quick execution of this notebook
